***Examiner's Amendment***

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The title of the invention is not descriptive. To more clearly indicate the invention to which the claims are directed, the title has been changed as follows:

--- IMAGE PROCESSING AND TRANSMISSION USING HIGH AND LOW  
COMPRESSION RATIOS DEPENDING ON IMAGE CHANGE CONDITIONS---.

***Examiner's Reasons for Allowance***

The following is an examiner's statement of reasons for allowance:

Referring to claims 1-15, the prior art searched and of record neither anticipates nor suggests in the claimed combination, managing a predetermined time wherein the compression degree of an image may become higher when the detected image change exceeds a predetermined criterion, and may become lower when the detected image change does not exceed the predetermined criterion elapsed by said predetermined time.

Referring to claims 17-31, the prior art searched and of record neither anticipates nor suggests in the claimed combination, compressing an image so that a compression degree of a predetermined rectangular region including a changed region may become higher when the detected image change exceeds a predetermined criterion, and may

become lower when the detected image change does not exceed said predetermined criterion, compressing said image so that a compression degree of a rectangular region including all of said rectangular regions among former images may become lower.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

#### ***Examiner's Remarks***

Regarding the publication by Sullivan et al cited in the EPO report, noting the cited portion in particular, the disclosure of INTRA-frame coding, INTER-frame coding, CR coding (choice between SKIP mode and INTRA mode), and prediction coding using a frame difference are all well known forms of motion image coding. Even the subsequently disclose MCP technique is well known. However, the claims are not anticipated nor suggested in view of Sullivan et al taken alone or in combination with any other prior art searched or of record. The claims are differentiated from the prior art as indicated above in the examiner's reasons for allowance.

Regarding the method claims, it is understood from the detailed specification that the detection, compression, and output steps must be performed by either hardware or by a computer, such as a PC or PDA, running firmware or software.

Regarding the claimed "recording medium storing a program", it is understood from the detailed specification that this medium corresponds to the disclosed "storage medium", such as a ROM, storing the program, not the "transmission medium".

***Cited Art***

The art made of record and not relied upon is considered pertinent to applicant's disclosure.
